*Marine Mount
Antenna Base*

RadioLabs announces the release of the WaveRV Marine. This is a complete wireless solution that is ideal for overcoming the taxing elements of marine applications. The WaveRV Marine is perfectly suited for mounting on a boat, RV, or for any mobile application. The wireless card is built in, eliminating the necessity for a PCI or PCMCIA card and with a simple USB connection the WaveRV Marine can get a wireless signal straight to any computer.

With the combination of an 8dB gain omni antenna and a high power wireless card integrated into a marine grade housing, the WaveRV Marine offers stunning performance in a rugged package. This setup will provide for over 15x, and up to 30x, longer range than standard integrated wireless devices.

Installation is simple. Just mount the WaveRV Marine to a standard marine mount and connect the USB cable to a computer's USB port. No other connections are needed to get up and running.

The ease of installation, ability to withstand the elements, and extreme performance make the WaveRV Marine the ultimate wireless solution for marine applications, as well as any application for extreme elements.
